

ZIMBABWE ELECTRICITY TRANSMISSION & DISTRIBUTION COMPANY

IMPORTANT NOTICE TO CUSTOMERS

2021 LOAD SHEDDING PROGRAMMES

INTRODUCTION

The Zimbabwe Electricity Transmission and Distribution Company is experiencing a power shortfall due to generation constraints at Hwange Power Station, limited imports and a programme of dam wall rehabilitation at Kariba, which requires that two generators be taken out daily for 12 hours. The planned outage of the two units then restricts Kariba power station output during these hours. The power shortfall is being managed through load shedding in order to balance the power supply available and the connected load.

The power utility therefore wishes to advise its valued customers that it shall be implementing load shedding as per the schedules below. Customers are encouraged to look out for their areas of concern for planning purposes. It is imperative to note that the programme takes cognisance and gives priority to critical supply points such as Major Referral Hospitals, Water and Sewer installations, National security establishments, Oxygen producing plants and Winter Wheat farmers.

While the power utility is doing everything possible to improve the generation capacity, customers are encouraged to use the available power sparingly.

Customers are advised to treat all electrical installations as LIVE as power can be restored without notice.

ZETDC HARARE REGION LOAD SHEDDING 2021 HARARE METROPOLITAN PROVINCE

How to use the tables:

Look up your suburb code in Table 2, then find this code in Table 1

TABLE 1 : AREA LOAD SHEDDING PERIODS

DAY		MORNING PEAK	EVENING PEAK
MONDAY	First areas to be affected	H2, H4, H5, H6, H7, H8, H10, H14, H15, H16, H18, H21, H23, H24, H27, H28, C1, C4, C5	H1, H3, H11, H12, H13, H17, H18, H19, H20, H22, H29, C2, C3

ZIMBABWE ELECTRICITY TRANSMISSION & DISTRIBUTION COMPANY

REDUCE YOUR ELECTRICITY BILLS!

ZETDC INTRODUCES NET METERING

ZETDC is inviting all customers with Solar Systems to participate in the net metering programme and enjoy reduced electricity bills.

The Net Metering programme is a scheme where customers generating renewable energy on their premises can feed excess power back into the ZETDC Network through a grid tied inverter.

Who Qualifies

All existing ZETDC customers with a solar system qualifies for NET Metering.

Benefits of Net Metering

1. The excess generation shall be measured and credit units given to the generating customer.
2. The credited units will assist in reducing the total customer bill at the end of the month and also ensure domestic customers benefit by buying their electricity at the lower tariff band.
3. Net Metering is beneficial to the power utility and the Nation at large through saving of foreign currency through import substitution of power.

Application forms can be downloaded from the ZETDC Website www.zetdc.co.zw and are also available at all ZETDC offices.

Forms and correspondence can also be communicated through Email:
